1 Enhanced Access Control - Overview

Fields of application

This function package provides further options to manage access control.

Implementation notes

You use the function package if you wish:

- to create replacement badges for employees who forgot their badge
- to open accesses/entrances automatically at certain times
- to secure accesses/entrances by entering an additional pin code

Integration

This function package can only be used if the HYDRA access control module is in use (function package *administration functions, access control*).

Features

- Replacement badge processing
 - Definition of replacement badges for employees who forgot their badge
- Permanent opening of the door
 - Time-controlled permanent release of accesses/entrances subject to weekdays and public holidays
- Pin code processing
 - Additional request of the pin code at security-relevant entrances at specific times (e.g. at night, on the weekend and public holidays)

2 Replacement Badges

Another badge may be assigned to employees who, for example, forgot their [badge](#).

The [access profile assignments](#) of the employee badge are copied to the replacement badge. This makes sure that the replacement badge has the same authorizations as the current employee badge.

[Clocking authorizations](#) for time & attendance are assigned to the person by the personnel number and, as a result, they also apply for the replacement badge. A replacement badge can also be used for shop floor data collection.

3 Permanent Door Opening

[Opening hours](#) of an [access group](#) control the permanent opening of doors. An entrance is permanently opened if the two options “access required” and “pin code” are disabled for an [access period](#).

4 Pin Code Processing

If an employee loses his/her badge unauthorized persons can misuse this badge as long as this loss has not been identified and the badge has not been blocked in the system. This misuse can be avoided by asking for the employee's pin code at relevant entrances.

An employee's pin code is defined in the "pin code" field of the [badge](#). Employees who do not have a pin code are not granted access if the pin code is requested at the entrance/access.

The [opening hours](#) of [access groups](#) define the times and weekdays or public holidays which additionally require the pin code to be entered. This processing is enabled by setting the option "pin code required" in the corresponding [access periods](#).

The reason "wrong pin code" is shown in the [access protocol](#) for access attempts denied because of a wrong pin code.
